DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In the instant case, applicant's requirement that the cumulative particle volume distribution is "bounded" by curves 1 and 2 of figure 10 is indefinite because figure 10 is not bound (or closed off) at either the upper or lower extremities.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-3 rejected under 35 U.S.C. 102(b) as being anticipated by US 4,989,775

(Shimajiri). Shimajiri teaches applying a flux having a cumulative particle volume distribution lying within the area bounded by Curves 1 and 2 of FIG. 10 to the components to be joined, wherein said flux is applied dry and electrostatically charged, and thereafter heating the components to braze them together (col. 2, ll. 30-68); wherein said flux has a particle volume

distribution lying entirely within the area bounded by Curves 1 and 2 of FIG. 11 (col. 2, ll. 30-68); wherein said flux is a potassium fluoroaluminate flux (col. 2, ll. 30-68).

Response to Arguments

Applicant argues that Shimajiri does not teach the claim 1 limitation that the cumulative particle volume distribution [lies] within the area bounded by curves 1 and 2 of figure 10. The examiner disagrees. The examiner interprets Shimajiri to teach the flux can be pulverized, inter alia, to have all particles in the size of 80um. Since all particles in the size of 80um are bound between curves 1 and 2 of figure 10, it is the examiner's position that Shimajiri meets the claimed limitation.
